

European Commission

Would you like to become a gem of water?

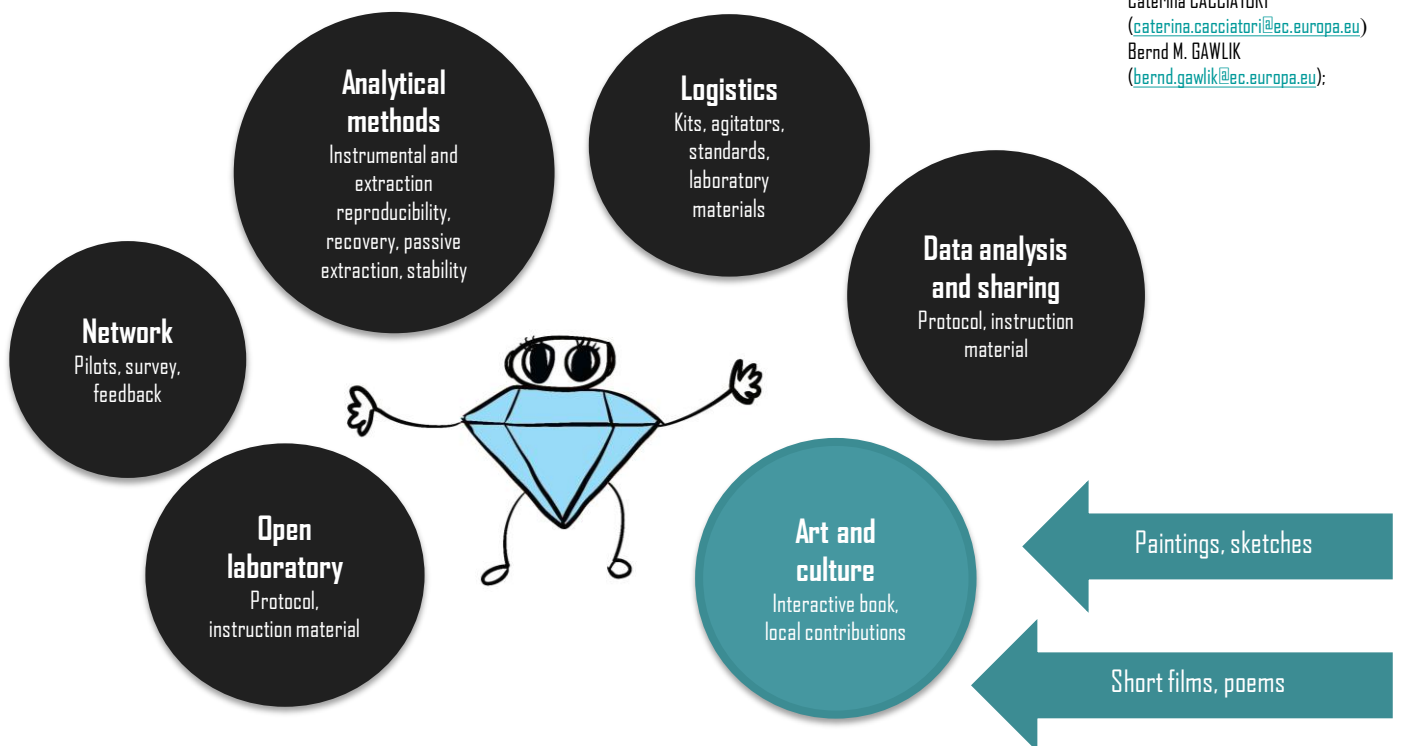

What is the objective of “The Gems of Water” project?

The European Commission Science Service, the Joint Research Centre (JRC), in partnership with the UN Environment Programme Global Environment Monitoring System, GEMS/Water, under the Social Engagement Platform of the World Water Quality Alliance established “The Gems of Water” project. “The Gems of Water” aims to build capacity and engage citizens for water quality monitoring of organic pollutants, including some emerging contaminants, by bringing close advanced analysis technologies to the general public.

What are the project components?
